

When you look for the right features in the present, you'll enjoy all the benefits in the future. Here's a breakdown of the walk-in components that will lead to long lasting durability.

01

FLOORING

Flooring is one of the key components for durability. Standard prefabricated floor panels can hold loads up to 600 pounds, while heavy-duty DURA-FLOOR units from Thermo-Kool can hold loads up to 12,000 lbs. per square foot.

02

DOORS

Look for doors and framing that are fabricated to prevent warping, sagging, or buckling under heavy usage.

03

PANELS

Thermo-Kool has locking mechanisms inside each panel that self-align and self-center to guarantee a tight seal that will last for years.

04

FLEXIBILITY

Not all kitchens are created equal, nor are they all square. While some offer cookie-cutter boxes to fit into square spaces, we provide the ability to customize down to the inch. Thermo-Kool is a better fit. Literally.

05

DISASTER-PROOF

A freezer or refrigerator is not usually the best place to spend time, but Class I urethane has a flame spread of 25 or less and a smoke density of 250. Thermo-Kool hurricane kits can help walk-ins withstand the winds of a Category 4 hurricane.
